1 Summary

2 Description

Adult beetles incubated at 30°C and 80% RH for more than 2 weeks to observe possible contamination from green muscardine fungus infection were employed in a bioassay to determine the susceptibility of adults to infection by a virus isolate collected from the Solomon Islands (**V23 B**). Treatment 1 consisted of 10-20 µl sterile filtered water injected at a point on the ventral surface at the junction of the hind leg and the thoracic using a sterile needle. Treatment 2 consisted of 10-20 µl heat-inactivated virus injection while in the treatment 3, beetles were injected with 10-20 µl of untreated virus preparation. Adults were then placed in clean glass mason jars (bleach-treated) with a piece of banana added for food. Beetles were incubated at 30°C and 80% RH in a Percival incubator. All beetles were weighted every other day but monitored daily for four weeks to observe any possible signs of mortality.

2.1 Replicate 1

A total of nine adult females and six adult males distributed among the three treatments were employed in this replicate.

2.2 Replicate 2

A total of 13 adult females and two males distributed among the three treatments were employed in this replicate.

2.3 Replicate 3

A total of seven adult females and eight adult males distributed among the three treatments were employed in this replicate.

2.4 Replicate 4

A total of seven adult females and 14 adult males distributed among the three treatments were employed in this replicate.

3 Mortality

Table 1: Mortality summary.

	bioassay_treatment	ntotal	ndead	mortality	adjusted_mortality	significance
0	control	22	5	0.227273	0.000000	1.000000
1	heat inactivated	22	5	0.227273	0.000000	1.000000
2	virus	22	20	0.909091	0.882353	0.000009

Table 2: Pairwise differences among mortality curves.

		test_statistic	p
control	heat inactivated	0.008648	9.259077e-01
	virus	26.455478	2.696826e-07
heat inactivated	virus	26.310731	2.906692e-07

4 Change in Mass

Table 3: Results of pairwise significance tests for differences in change in mass.

	control	heat inactivated	virus
control	-1.000000	0.818527	0.818527
heat inactivated	0.818527	-1.000000	0.707981
virus	0.818527	0.707981	-1.000000
